

**The International Charitable Foundation 'Alliance for Public Health'  
announces open call for consultants for operational research conduction.**

The International Charitable Foundation "Alliance for Public Health" is a leading non-governmental professional organization which makes a significant impact on the epidemics of HIV/AIDS, tuberculosis, viral hepatitis and other socially dangerous diseases in Ukraine in cooperation with state partners and civil society organizations through providing financial and technical support to relevant programs, which cover over 300,000 members of most vulnerable populations, which is the highest indicator in Europe. Alliance team includes over 100 professionals who are based in Kyiv.

According to WHO, there are 20-25% of missing TB cases annually in Ukraine. It is reasonable to assume the most of these cases are among vulnerable populations, such as homeless people, IDPs, PWIDs, Roma population, ex-prisoners etc. To address the problem among missing TB cases Alliance for public health developed and started pilot intervention "Optimized TB case finding and social support of contact persons". The intervention is aimed at screening for TB of contact persons (social, household, family contacts etc.) of vulnerable groups' representatives. The intervention is implemented in the framework of the Global fund to fight AIDS, tuberculosis and malaria grant for 2021-2023.

It is also planned to assess the effectiveness of the pilot intervention. For this purpose, significant amount of data is collected within the intervention implementation.

Alliance is looking for experienced consultant who will conduct the operational research using these data ensuring international scientific standards and based on the results will prepare the paper for publishing in international journal.
